## 1 World Model

### 1.1 JEPAs

Training object is (likely) representations, and use CEM to MPC.

- I-JEPA,V-JEPA 2506.09985,2512.10942,2404.08471,2301.08243,2603.14482
- leWM-based 2603.19312,2605.26379,2606.32026,
- DINO-WM 2411.04983

### 1.2 latent representations

- 2603.12231, smoothness for representations
- 2607.27924, project DINO token
- *2609.29171, planning in latent*

### 1.3 WAMs

### 1.4 Others

- 2603.04553,Point WAMs
- 2610.26844, dataset for other goals

## 2 Loop

- 2602.02156,LoopViT
- 2512.19941, use DP to find training-free loops in ViTs
- 2604.09168, refine in Diffusion
- 2609.40305-loopdit

## 3 NCA

- 2604.24990, Summary
- 2609.01449, Diffusion as NCA
- 2610.08518,2609.36126, 2D reasoning w/ NCA

## 4 Theory

- 2202.10054,question ID/OOD acc using gradient flow. Check if u wish to see analyses of subspace
- 2401.17505,great work of "capacity" of models[1]
- several works of JEPAs.
  - 2605.26379,Gaussian world, how SIGReg work ?
  - 2608.22764, LpWM , sprase
  - 2603.12231, smoothness for representations

[1] here to say, inductive bias is needed for models to learn
